Note	ii
Foreword	iii
Acknowledgements	iv
Introduction	1
Application of UNFC to Rare Earth Elements and Thorium Comprehensive Resource Recovery Projects in Argentina	2
Introduction	2
Nuclear Power and Thorium Utilization	2
Rare Earth Elements	3
Legal Framework for Nuclear Minerals and REE	4
Comprehensive Resource Recovery Approach	5
REE and Thorium Resources and Application of UNFC	5
Rodeo de los Molles REE (Th, U) Deposit/Project	6
Puna and Cordillera Oriental Thorium (REE) Deposits	11
The III River and V River Surveys	12
Exploration Projects	13
Jasimampa REE (Th) Project	13
Susques REE (Th) Project	13
Cachi REE (Th) Project	13
Cueva del Cacho REE (Th) Project	14
Conclusions	14
Acknowledgements	16

Application of UNFC to PhosphateRock - Uranium Resources: A Case Study of the El-Sebaeya Projects, Nile Valley, Egypt	18
Introduction	18
Uranium extraction from phosphate rock	19
Phosphate resources of Egypt	20
Nile Valley phosphate deposits	21
Insoluble Residue	22
East and West El-Sebaeya Projects, Nile Valley: Classification of quantities using UNFC	23
Conclusions	26
References	27
Case study on bridging from the Oil and Fuel Gas Reserves and Resources Classification of the Russian Federation to UNFC: Field A in West Siberia, Russian Federation	29
Introduction	29
Description of the project	29
Resource classification	34
Oil and Fuel Gas Reserves and Resources Classification of the Russian Federation	34
Bridging to UNFC	35
Mapping E and F axes	35
E axis	36
F axis	38

Mapping the G axis	38
Observations and discussion	39
Dataset observations	39
Classification observations	40
Conclusions	41
Case study on bridging from the Oil and Fuel Gas Reserves and Resources Classification of the Russian Federation to UNFC: Structure S in West Siberia, Russian Federation	42
Introduction	42
Description of the project	46
Resource classification	46
Oil and Fuel Gas Reserves and Resources Classification of the Russian Federation (RFC)	46
Bridging to UNFC	47
Mapping E and F axes	47
Mapping the G axis	49
Observations and discussion	50
Dataset observations	50
Classification observations	50
Conclusions	51
Pilot project for the classification of Mexico's petroleum resources and reserves based on UNFC	52
Introduction	52
Description of the Pilot Project	53
Planning	53
Phase 1	54
Phase 2	54
Phase 3	54
Pilot project execution	55
Project definition and considerations	55
Mapping tools	56
Block I Project Case Study	60
Results	67
Capturing added value with UNFC	69
Conclusions	70
Acknowledgements	71
Annex: Detailed Project Schedule	72
Glossary	73
Uranium projects of Argentina according to UNFC: An update	74
Introduction	74
Nuclear Power Generation in Argentina	74
Legal Framework of Nuclear Minerals in Argentina	75
Comprehensive Resource Recovery Approach	76
Argentina's Uranium Resources and Associated Critical Materials and Application of UNFC	76
Main Uranium Projects	76
Uranium Exploration Projects	81
Other Potential Sources of Uranium	84

Conclusions	86
Acknowledgements	90
References	90
Application of UNFC for monitoring the project maturity of the Central Jordan Uranium Project	93
Introduction	93
Regional Geology	95
Geology of Central Jordan	96
Lithology and stratigraphy of the mineralized zone	96
Estimation History and Application of UNFC	98
Channel samples data	99
Borehole data	99
Phase I Estimation	99
Phase II Estimation	100
Conclusions	104
References	105
Case study on application of UNFC to the uranium deposits of Mexico	106
Introduction	106
Uranium exploration in Mexico	106
Sierra Peña Blanca Project	108
La Sierrita Project	110
Durango uranium Project	112
Los Amoles uranium district	113
Conclusions	114
