CONTENTS

PREFACE				
FO	FOREWORD			
1.	ENVIRONMENT			
	The catastrophe at the Chernobyl nuclear power plant	1		
	Global traces of the catastrophe	5		
	Atmospheric contamination	5		
	Lithosphere contamination	11		
	Hydrosphere contamination	13		
	Problems of the sarcophagus	15		
	Decontamination and radioactive waste control	17		
	Hot particles	19		
	Transfer of radionuclides and secondary pollution	20		
	Radiological control and monitoring	2,1		
	Scientific hypotheses	23		
	Research recommendations	23		
2.	NATURAL ECOSYSTEMS			
	Impact of radionuclides on the biosphere	25		
	Impact on the vegetation	27		
	Impact on wild animals	30		
	Impact on aquatic ecosystems	34		
	Use of natural resources	36		
	Ecological monitoring	39		
	Scientific hypotheses	41		
	Research recommendations	42		

Migrational pathways of radionuclides Radionuclides and crop production Radionuclides and cattle breeding Agricultural countermeasures Agriculture on polluted lands Radiological control of foodstuffs Agroecological monitoring Scientific hypotheses Research recommendations 4. HUMAN ECOLOGY Impact on human ecology Radiation protection Protective measures Permissible dose limits Relocation problems Human health effects Population health control and monitoring Scientific hypotheses Research recommendations 5. BIOLOGICAL DIVERSITY The sustainable biosphere and biodiversity Dual nature of biological systems Association as a principle of biological organization Self-organization of the biosphere Statics and dynamics of biodiversity Biodiversity research programme Impact of radionuclides on biological diversity Scientific hypotheses Research recommendations 6. GENETIC SYSTEMS Mutational load Dynamics of the mutational load Genetic risk Genetic adaptation Genetic screening Genetic dosimetry 120	3.	AGROECOSYSTEMS	
Radionuclides and crop production Radionuclides and cattle breeding Agricultural countermeasures Agriculture on polluted lands Radiological control of foodstuffs Sadroecological monitoring Scientific hypotheses Research recommendations 4. HUMAN ECOLOGY Impact on human ecology Radiation protection Protective measures Permissible dose limits Relocation problems Human health effects Population health control and monitoring Scientific hypotheses Research recommendations 5. BIOLOGICAL DIVERSITY The sustainable biosphere and biodiversity Dual nature of biological systems Association as a principle of biological organization Self-organization of the biosphere Statics and dynamics of biodiversity Biodiversity research programme Impact of radionuclides on biological diversity Scientific hypotheses Research recommendations 6. GENETIC SYSTEMS Mutational load Dynamics of the mutational load Genetic risk Genetic adaptation Genetic screening Genetic dosimetry 120		Impact on agriculture	43
Radionuclides and cattle breeding Agricultural countermeasures Agriculture on polluted lands Radiological control of foodstuffs Agroecological monitoring Scientific hypotheses Research recommendations 4.
